

OUR **HOTTEST** SUCESS STORY

Over 80 AMFEs and multialerts® installed at Staedtler (Europeans biggest pen manufacturer)

 **STAEDTLER**®

WE'RE THERE BEFORE YOU GET BURNT OUT

As the largest European manufacturer of wood-cased pencils, erasers and modeling clay, as well as the world market leader for industrial plasticine, the issue of safety is no small minor matter for Staedtler Mars GmbH & Co. KG. With over 80 control cabinets in the logistics center in Nürnberg (Germany), a fire protection solution is required that is networked, works simultaneously and absolutely reliably. With our automatic mini fire extinguisher AMFE and the associated special solution for simultaneous triggering multialert®, we were able to provide Staedtler with a high-quality solution and ready-to-use installation in the shortest possible time – and without any business interruption!

In the event of a fire, the AMFEs or smoke detectors send a signal to the multialert® at an early stage, which then triggers the AMFEs simultaneously and initiates a transmission to the higher-level fire alarm center.

We are pleased to have played our part in ensuring the uninterrupted distribution of writing implements worldwide and look forward to further cooperation.

KEEPING IT COOL UNDER HOT CONDITIONS

What you avoid with the AMFE:

- Plant Standstill
- Production and Shipping Downtime
- Loss of the Goods
- Inability to deliver (in the case of Staedtler worldwide)
- Ligament Standstill

THE AMFE – get to know more under www.amfe.de/en
